Introduction to CVCH Internship Program - Welcome

MATCH NUMBER: 2125

Dear Intern Applicant,

Welcome to the CVCH website that describes the **APA-accredited** Doctoral Internship in Clinical Psychology, offered in the Department of Behavioral Medicine at Columbia Valley Community Health in Wenatchee. This doctoral internship program offers an in-depth training experience in clinical and health psychology services at an integrated primary care community health center. With emphases on support and flexibility, our objective is to refine interns' clinical and scholarly skills so that interns are prepared for work in a variety of settings.

The following information is designed to provide a comprehensive overview of the CVCH training program. We look forward to answering any specific questions you might have that are not included in this description so feel free to contact anyone involved in the program via phone or email.

Intern Selection: To apply, follow all instructions on the APPIC directory listing and submit materials via the AAPI electronic portal. The program relies upon data obtained from interns' AAPIs as well as supporting documents such as letters of reference from previous supervisors in order to determine whether practicum experiences have been sufficient preparation for the internship. Descriptions provided by interns themselves and from letters of reference offer insight into the type of training experiences the interns have had at leading up to internship.

In selecting applicants who have had the number and type of clinical experiences most consistent with the CVCH Behavioral Medicine Internship program, we ensure that candidates will be a good "fit" with our program. However, if you do not have experience in a medical setting, we still encourage you to apply. This type of training is helpful, but not necessary to succeed at our site. We are also looking for a diverse range of candidates and encourage everyone that qualifies to apply!

All candidates that will be considered must have a Master's degree in psychology, mental health counseling, social work, marriage and family therapy, or another related field and must be eligible for Master's level licensure in Washington State as a **Licensed Mental Health Counselor (LMHC)**, **Licensed Advanced Social Worker (LASW)**, **Licensed Independent Clinical Social Worker (LICSW)**, or **Licensed Marriage and Family Therapist (LMFT)**. In order to apply with us, you only need to be **license-eligible** by the time you match with our program. If you match with us, our agency will provide extensive support in obtaining the required licensure.

See the DOH Mental Health Professions website for more details:

<http://www.doh.wa.gov/LicensesPermitsandCertificates/ProfessionsNewReneworUpdate/MentalHealthProfessions>

<http://www.doh.wa.gov/LicensesPermitsandCertificates/ProfessionsNewReneworUpdate/MentalHealthProfessions/FrequentlyAskedQuestions>

The internship runs from **August 28, 2018 to August 26, 2019**, for 1 full year. The stipend is **\$30,160**, and currently there are no additional funds for travel to professional conferences in the budget, but this may change as the year progresses. Interns receive **three weeks of paid time off** (PTO) and are eligible for benefits, such as dental insurance, medical insurance, and disability insurance.

We know how tedious and anxiety-provoking the application and interview process is, so allow us to answer your questions or explain the program to you. Feel free to contact our current interns as they are happy to answer questions via phone or email. We will do our best to make this application and interview process as painless as possible. Thank you for your interest in our internship program. We look forward to hearing from you.

Dominika Breedlove, Psy.D.

Director of Training
Columbia Valley Community Health
Behavioral Medicine
600 Orondo Ave., Suite 1
Wenatchee, WA 98801
509-662-6000 Ext. 1073
dbreedlove@cvch.org

Note: If matched, incoming interns will be required to submit to a background check and participate in an employee health visit (ensuring current immunization status) prior to beginning work.

Please use the AAPI application portal to submit all materials.

Use the deadlines listed on the CVCH Behavioral Medicine APPIC web directory.

CVCH does not unlawfully discriminate or unlawfully make employment decisions on the basis of race, color, gender, religion, sexual orientation, disability, marital status, national origin, age, or any other characteristic protected by law. Diverse applicants are encouraged to apply!

Training Program Philosophy

In brief, the CVCH Behavioral Medicine (BMed) Internship is a clinical psychology training program in a medical setting. It is designed to train doctoral interns in the general skills required to function independently in entry level professional positions, following graduation and the requisite licensure or certification. It is best described as following a practitioner/scholar model, with mentoring, solid clinical training and the utilization of the scientific literature to inform and shape practice, teaching and scholarly work. In addition to the generalist training recommended at the internship level, we also offer an emphasis in clinical health psychology, consistent with our medical setting. We stress multidisciplinary functioning, multiple theoretical approaches, and cultural sensitivity. Also stressed are personal development and the crafting of one's professional identity. Through didactic lectures and seminars, intensive supervision, and ample direct patient contact, interns receive comprehensive experience in quality psychology training which engages them in psychological assessment, treatment, therapy, consultation, and community involvement.

Psychology interns are viewed as residents by the medical clinic and colleagues by staff psychologists. They are involved in constant daily clinical give and take. Interns often spend blocks of time with providers as they engage in professional activities. It is through these interactions that the majority of mutual assessments of ability take place. While individual differences in theoretical orientation are expected amongst clinicians and interns, we feel well-trained clinical psychologists must have a core of traditional clinical and research skills at their disposal. As a site we will work to broaden the interns' current level of exposure to research in practice.

Further, exposure to diversity in race, culture, lifestyle, socioeconomic status, physical status, etc. is an important training objective here. Washington is largely White and European, although Wenatchee has a significant population of Hispanic/Latino residents. Diversity is commonly discussed throughout the year and interns are encouraged to challenge their thinking as cases present they have never seen before. Interns will get comfortable working with interpreters in their sessions for the Hispanic/Latino patients as well as phone interpreters for other language barriers that may present over time. Diversity is discussed in clinical presentations and supervision, through didactics, during consultations, and in trainings throughout the year.

Objectives, Goals and Core Competencies

The primary setting for the internship program is a community health center. The mission of CVCH is "to provide access to improved health and wellness with compassion and respect for all." As such, the interns receive clinical experiences as well as formal training in a wide range of core clinical competencies consistent with a broad-based generalist training. There is also considerable emphasis on health psychology. The interns learn to focus on the patient from a whole perspective and to take into account any medical issues that may be exacerbating the presenting symptoms or contributing to the diagnostic picture. A typical intern caseload includes patients with a wide range of mental health problems as well medical issues. Supervisors have a diverse clinical background that includes generalist training as well as health psychology expertise.

The internship experience involves training which extends and integrates the intern's basic academic program. The internship is designed to offer a broad range of experiences to develop these core professional competencies. Interns have a shared responsibility in designing and planning the internship experience in collaboration with the Training Director. This process is intended to ensure that the intern's training plan is integrated with the intern's overall graduate or professional school training plan, and that the internship provides a coherent progression from the basic knowledge and practical clinical skill competencies achieved in the academic program to the core practice competencies that

are to be acquired in the internship. Interns will spend approximately 20 hours per week in face-to-face direct service delivery. Our internship training is directed towards developing nine basic core goals that encompass multiple professional competencies expected of an entry level doctoral level psychologist in the areas of:

Assessment:

A comprehensive understanding of the current diagnostic systems; proficiency in the use of focused interviewing and diagnostic skills required in the integrated primary care setting; and proficiency in the selection, administration, and interpretation of brief screenings and assigned psychological testing and report writing in the areas of intellectual, cognitive, and personality assessment.

Intervention and Treatment:

Conducting individual and group counseling/psychotherapy across a variety of populations; effective application of evidence-based interventions and treatment approaches to a wide range of presenting issues across the continuum of health and illness in the integrated primary care setting.

Ethical-Legal Standards and Conduct:

Familiarity with and understanding of ethical and legal standards in professional psychology; adherence to the APA ethical guidelines and WA state laws that pertain to professional psychology.

Professional Values, Attitudes, and Behaviors:

Demonstration of appropriate professional demeanor and behavior, including professionalism, self-awareness, and stress-management skills, among others.

Communication and Interpersonal Skills:

Ability to produce oral and written communications that are expected of a psychologist-in-training; ability to establish and maintain appropriate working professional relationships with peers, supervisors, co-workers, and other members of the interdisciplinary team.

Consultation and Interprofessional/Interdisciplinary Skills:

Understanding of one's role as a Behavioral Medicine Consultant in the integrated primary care setting; and ability to assume different professional roles (e.g., consultant, therapist, etc.) based on the changing needs of the patient and the interdisciplinary team.

Individual and Cultural Diversity:

Recognition of the impact of individual and cultural diversity on health and wellness and tailoring assessment, intervention, and treatment accordingly; demonstration of awareness and respect for the unique issues in the marginalized populations and their impact on health.

Supervision:

Ability to effectively use supervision and consultation to advance one's learning and identified professional goals.

Application of Research to Clinical Practice:

Application of the scientific literature to all aspects of one's clinical practice; demonstration of critical thinking skills when gathering, evaluating, and integrating research or other scholarly activities to clinical practice.

The 12-month training year begins with an Orientation Week in which interns receive a thorough introduction to their training activities and schedules for the year. During the orientation period, supervisors begin to evaluate the intern's strengths and weaknesses with respect nine core competencies. The evaluation involves a review of previous clinical experience to determine which training activities to emphasize during the year. One of the outstanding features of this program is the flexibility that an intern and his or her supervisors have in developing an individualized training experience for the year.

Opportunities for the interns range from diagnostic evaluations and brief crisis-oriented therapy, to long-term (12 or more appointments), insight oriented psychotherapy. Training is available in a variety of therapeutic modalities, including individual, marital, family, and group. The program specializes in the brief solution focused treatment that seems to best serve our primary care setting and patient needs. However, the interns also carry some long-term therapy patients on their caseloads. Our program emphasizes empirically based psychotherapies.

Training Program Overview

This internship is an active member of APPIC and is APA-accredited.

This internship site agrees to abide by the APPIC policy that no person at this training facility will solicit, or accept for use any ranking-related information from any applicant. The APPIC Match Policies can be found at their website at: <http://www.appic.org/Match/About-The-APPIC-Match> . Our internship site maintains a strong commitment to psychology intern and staff diversity. Both CVCH and the Behavioral Medicine Department take a strong stance regarding policies on non-discrimination and accommodation for success in our internship.

The following is a brief overview of the program schedule.

Initial Training Period:

The first 4-6 weeks of internship, the interns are closely supported and monitored by supervisors. They primarily shadow supervisors on a variety of patient services as they become increasingly more familiar with the department and clinic, the structure and function of the internship program, and the integrated model of primary care. This time is replete with a variety of training activities in order to gradually enable the interns to increase their independence. During this initial training period the supervisors are tasked with identifying any apparent gaps in each intern's training or issues that they may be having with specific competencies. This allows individual supervision to address any concerns. In the past this has looked like "clearing" the intern to see patients, but not specific types of disorders or visit types they may not be ready to see. This can include pain evaluations, Suboxone evaluations, hospital and/or disruptive patient visits until the intern is confidently competent and the supervisor is comfortable with his/her level of skill. *The initial orientation and training period involves ample opportunities to shadow our primary care medical providers and our psychiatric provider(s).

Required Training Activities for Successful Completion of Internship

The following is a list of required training activities for successful completion of internship (*important additional details are provided below):

1. **Completion of 1,960 hours of training in 49 weeks**, excluding 3 weeks of paid time off.
2. **A minimum of 500 hours of direct clinical services.** Direct clinical services include all clinical activities, including integrated visits/consultations, individual, couples, family, and group psychotherapy; and psychological assessment.
3. **Participation in the following supervision activities:** two hours of weekly individual supervision, two hours of weekly group supervision, one hour weekly of case consultation, and one-two hours a month of secondary peer supervision with assigned Postdoctoral Fellow(s). The interns also participate in a monthly administrative Internship Meeting.
4. **Participation in two hours of weekly didactic trainings.** The interns present three times in didactic trainings during the year.
5. **Participation in a monthly Testing Meeting.**
6. **All competency areas should be a minimum of “3: Meets Expectations” at 6 months into the program and “4: Proficient/Advanced” at the end of the program/12 months.**

Additional details regarding requirements:

1. INTEGRATED MODEL OF PRIMARY CARE

The Integrated Model of Primary Care supports the medical providers by assisting with patients that are distressed or struggling with a mental health or medical related issues. Patients of all ages enter Behavioral Medicine (BMed) through referral and walk-in from Primary Care Providers. Doctoral interns function as BMed Consultants during this training activity and are considered part of the team. The integrated model of care is collaborative between PCP and BMed. Patients with all levels of need are seen on a daily basis. Therapy is generally focused on improved function and is brief in nature. Interns are required to carry a modest caseload. This allows for students and their supervisors to select cases, which are best suited to fill the intern's clinical experience gaps and be involved in other training experiences.

Most therapeutic modalities are encouraged in this setting, and interns are often consulted by other staff regarding advice in areas of the intern's particular interest and expertise. Conversely, interns are expected to explore new clinical techniques to ensure their time in the department is one of training and not merely service. Interns will work with children, adults, families and groups throughout their training. Further, many patients are monolingual Spanish speaking. If interns are unable to fluently speak Spanish, an interpreter will be provided. This allows for the opportunity to work with Hispanic patients

dealing with a variety of issues such as acculturation, immigration & deportation, migrant work, seasonal work, etc. BMed providers involved with specific areas are available for supervision and guidance.

Requirement details: The interns learn and develop proficiency in the Integrated Model of Primary Care in a variety of training activities all year.

2. INTEGRATED PRIMARY CARE VISITS

Integrated visits refer to services performed by BMed providers in response to an urgent/emergent/preventative request from one of our primary care providers. If during the course of a routine primary care appointment the medical provider becomes aware that there is a behavioral concern or health related issue with the patient that he or she is unable to address adequately at that moment, the provider can request a BMed consultation, i.e., an integrated visit. The patient remains in the medical exam room and awaits the BMed provider, which is usually within 15 minutes of notification. Requests for integrated visits can vary widely in scope and purpose from simple “meet and greet” visits during which BMed provider introduces our services to the patient, to request for diagnostic assessment and treatment recommendations, to acute crisis management. The visits can vary in duration as well depending on the nature of the referral request. The average integrated visit is 15 minutes in duration and up to 30 minutes. During the course of the integrated visit, the medical provider and BMed provider work very closely together in order to provide the most wraparound care possible and to address the patient’s needs at the time of need (rather than asking the patient to wait for behavioral services at a later time). This ensures that the services are truly “integrated.” This is also part of the Medical Home Model of care. The interns begin the training year by shadowing supervisors completing integrated visits. As the interns gain proficiency, they are assigned one day a week completing only the integrated visits.

Requirement details: The interns learn and develop proficiency in the Integrated Primary Care Visits in a variety of training activities all year.

3. PAIN MANAGEMENT

Pain is becoming a specialty area that few providers are trained in, but there is a growing need. CVCH currently has a pain management program that requires patients with chronic pain to participate in a standard process. This begins with a narcotic contract, pain evaluation, and participation in pain management psycho-educational group. Interns are trained in pain management protocols and barriers to pain management. The interns are trained and perform Chronic Pain and Suboxone evaluations throughout the year.

Requirement details: The interns are trained to perform Chronic Pain and Substance Abuse Evaluations and complete those evaluations routinely throughout the year under supervision.

4. GROUP THERAPY

Currently Chronic Pain and DBT are two groups that are run intermittently throughout the year. These groups are part of the training experience and are facilitated by interns. Ample supervision and training are provided for interns who may have less prior experience with group therapy prior to internship. Interns are encouraged to develop and run other groups based on their interests and the needs of our patient population.

Requirement details: The interns are required to run at a minimum one group a year (two groups a year are encouraged).

5. ASSESSMENT SERVICE

In order to integrate psychological assessment with the other duties performed by a psychologist, and to expose the intern to a variety of approaches to psychological evaluation, the psychological assessment training activity will consist of a requirement to perform a *minimum* of 4 psychological assessments over the course of the year (additional assessments are encouraged but not required). Assessments are flexible and designed to reflect the interest of the intern, as well as address any growth areas in skills. Factors included in the competency of the assessment process may include: researching relevant clinical issues, clarification of referral questions, patient interviewing techniques, test selection and interpretation, report writing and patient feedback. The intern may choose to evaluate any combination of adults or children, psychiatric or non-psychiatric medical patients, the chemically dependent, etc. Referral questions most frequently involve diagnostic clarification, neurocognitive screenings, health psychology consultations, and personality and emotional functioning evaluations.

The minimum expectation for each assessment is that both clinical interview and other measures are used in order to form a cohesive picture of the patient. Although brief, functional assessment is a component of the internship, this training program is not designed for candidates who are expecting a major focus on assessment.

Requirement details: The interns are required to complete 4 formal psychological evaluations during the training year.

6. TESTING MEETING

The Testing Meeting is designated to advance the interns' assessment and report writing skills. This typically includes a combination of the following activities: 1) learning and presenting the administration, scoring, and interpretation of new psychological instruments, tests, and measures the interns are not familiar with; 2) informal presentations or staffing of psychological assessment cases; and 3) informal presentations of peer-reviewed journal articles or other scholarly literature broadly related to assessment and psychological testing.

Requirement details: At the beginning of the training year, the supervisors collaboratively with the interns' discuss the schedule and assigned activities. The assigned activities are flexible based on the interns' interests and goals for the year.

7. GROUP SUPERVISION

The group supervision is scheduled for two hours weekly and includes a combination of learning activities. The structure of group supervision typically alternates weeks of case consultation and a review of peer-reviewed journal articles. Case consultation involves discussion with peers and supervisors and role playing. The interns also alternate weeks during which they are responsible for a selection of a peer-reviewed journal article. The article is read by both interns and supervisors prior to group supervision and subsequently discussed during group supervision. The articles are expected to be relevant to the intern's clinical or scholarly work on internship. The purpose is to learn new information or skills that would augment the intern's experience and apply to clinical cases the intern is working with.

Requirement details: Interns present approximately one (1) peer-reviewed journal article a month. The schedule of presentations is managed by supervisors.

8. CASE CONSULTATION

Weekly one-hour case consultation meetings include all Behavioral Medicine staff. Interns will present cases of their own as well as engage in case consultation on cases of their supervisors and the psychiatric provider.

Requirement details: *Weekly case consultation meeting is informal and designed for the interns and staff to communicate about shared patients in an informal and collegial manner. Typically, 5-7 cases are discussed in the course of the meeting. This meeting does not require any formal preparation for the intern.*

9. FORMAL PRESENTATIONS

The interns are required to complete one (1) formal case presentation and two (2) didactic presentations within the course of the training year. One of the two required didactic presentations is on a topic of the intern's choosing while the other is expected to be on the topic within the realm of health psychology (* Specific health psychology topics will be assigned or suggested by supervisors, based on the intern's preference). The presentations will be scheduled ahead of time and ample direction will be provided regarding the format, content areas required, and other requirements.

Requirement details: *The interns are required to complete one (1) formal case presentation and two (2) didactic presentations within the course of the training year.*

Sites

Columbia Valley Community Health is a Joint Commission certified Primary Care Medical Home that offers a wide array of integrated services for all age groups.

CVCH Wenatchee: Medical, Dental, and Express Care

CVCH Wenatchee has an ambulatory medical clinic that offers healthcare and screening to anyone who needs medical services, including migrant or seasonal agricultural workers and low-income groups. Fees are charged on a sliding scale. Services include general family care, women's healthcare and obstetrics, walk-in medical services, dental care, Women's Infant Children (WIC), diabetes education, pharmacy, behavioral health, and behavioral medicine. The Wenatchee clinic staffs physicians, family medicine advanced registered nurse practitioners (ARNPs), and physician assistants (PAs) and medical support staff. CVCH also has medical students, nursing students, nurse practitioner students, physician assistant students, dental students, and radiology students on rotation at any given time.

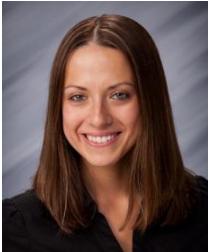

CVCH Wenatchee medical clinic is the main site that interns operate from. Their offices, trainings, and majority of meetings occur at this site. Interns work closely with medical providers and support staff to better manage patient issues. They learn how to best support medical providers in their work with a patient towards compliance with medical treatment, which also serves their mental health issues. Due to the fast paced environment, interns learn to think quickly and adapt to the changing demands of the day. Interns are integrated quickly into this setting and are sought out as the internship progresses by medical providers on complex issues and complicated patients. Interns will feel valued and have a strong sense of themselves as a professional. The Behavioral Medicine Internship Program at CVCH

Wenatchee offers unique training opportunities in psychological assessment, treatment, therapy, consultation, and community involvement.

Other sites:

Although the interns are primarily assigned to CVCH's main location in Wenatchee, there may be additional opportunities to provide services at one or more of our other six locations, including East Wenatchee Medical, Chelan Medical and Dental, Columbia Pediatrics, and Wenatchee Valley College.

Supervisors and Staff

	Blake Edwards Behavioral Services Director
	Dominika Breedlove, Psy.D. Director of Clinical Training Behavioral Medicine Consultant
	Misha Whitfield, Psy.D. Behavioral Medicine Consultant Clinical Supervisor
	Karen Maqueda Teaching Program Coordinator
	AnnMarie Batdorf, Psy.D. Candidate, LMHC Behavioral Medicine Consultant

	<p>R. Alex Padilla DNP, APN, CARN-AP, CRNI Psychiatric Nurse Practitioner</p>
	<p>Melissa Reilly, LMHC Behavioral Medicine Postdoctoral Fellow</p>
	<p>Daisy Rivera, LMHC Behavioral Medicine Postdoctoral Fellow</p>
	<p>Micah Vacatio, LICSW Social Worker</p>
	<p>Brenda Andrade Senior Program Assistant</p>
	<p>Marcy Reyes Behavioral Medicine Assistant</p>
	<p>Michelle Banuelos Behavioral Medicine Assistant</p>

Supervision

Supervision is provided by psychologists in the Department of Behavioral Medicine. **Interns receive two hours of individual supervision and three hours of group supervision per week throughout the internship year.** They also receive informal supervision provided by the Behavioral Medicine Postdoctoral Fellows. During the first quarter, the interns are also heavily supervised during orientation to the various training activities. Finally, there are ample opportunities for more informal supervision and consultation on a daily basis with both supervisors. Typically the interns accumulate significantly more hours of supervision by the end of the training year than would be expected with the formally scheduled four weekly hours of supervision.

Didactic Training

In addition to informal contacts, learning also takes place in a number of scheduled presentations and seminars. These seminars exist to assist interns in expanding their learning base on certain topics.

All didactic seminars will occur from **9am-11am Tuesday** mornings, typically in CVCH **Cider Room**. Relevant cases at CVCH are discussed as they relate to the didactic seminar topic. If a didactic seminar is a video/online presentation, the supervisor who will facilitate an interactive discussion following the didactic portion.

The following is a sample list of most common, broad didactic training topics.

A schedule of presentation will be provided to the interns at the beginning of the year.

Integrated Primary Care Psychology: Skills & Competencies Health Psychology: Topics and Practical Applications

Ethical Issues & Professional Development

Evidence-Based Assessments & Treatments in Integrated Primary Care

Psychopharmacology

General Comments (What did you like about this didactic? What did you dislike? Suggestions?):

Frequently Asked Questions

How many positions are available?

There are two fully funded doctoral internship slots. Additionally, there are two Psychology Postdoctoral Fellow position at this time. CVCH also trains medical students, dental students, graduate students and residents from several specialties, so frequently there are other students at the clinic with whom interns can interact.

What is it like to live in Wenatchee?

Wenatchee is clean, attractive and safe, with a diverse population. It is easy to get around Wenatchee with quick access to both Seattle and Spokane for weekend trips. The Columbia and Wenatchee Rivers provide for water activities, and the surrounding mountains, lakes and rivers make Washington State an ideal location for recreation. Pybus Market is located in the downtown area and includes a weekend farmers' market as well as local restaurants and shopping. It is a very easy city to "break into", with friendly people who are warm and accepting of newcomers.

How is the cost of living in Wenatchee?

Housing is about the national average. Housing is available year round, and we suggest interns start looking at rentals as soon as possible to get an idea of what is available. Rentals are also listed online at www.craigslist.com. Food and entertainment are of lower cost than elsewhere in the country, but gas prices are a bit higher than on the Western Coast of the state. Most places to live are within ten minutes of the CVCH Wenatchee Clinic, so little gas money is spent on commuting. Buses also run directly by the clinic and employees (interns) get discounts on bus passes. Bikes are always welcome!

How about insurance?

Excellent medical coverage is included for each intern beginning the first of the next full month. Family medical coverage and life insurance are also options in line with regular CVCH employee benefits. Malpractice insurance is provided at no cost to psychology interns.

What is the department like?

The CVCH Department of Behavioral Medicine is a learning-oriented, supportive environment. We take patient care seriously while also fostering a low-stress environment for Behavioral Medicine interns, providers, and staff. Interns bring a tremendous amount of knowledge and experience to the program, and that is noted and respected within the department and clinic.

How are the facilities?

The facilities are beautiful, modern, well appointed. CVCH Wenatchee has undergone extensive renovations in the past several years, which has led to significantly improved facilities. Interns each have their own office with dual monitor computer stations and telephones at the CVCH Wenatchee Clinic. The clinic provides email addresses and basic office supplies. Interns and staff Behavioral Medicine providers share access and use of 4 full-time Behavioral Medicine Administrative Assistants. BMed Assistants help schedule, translate, clerical duties, help patients with community resources, etc.

What is the theoretical orientation of the psychology faculty?

The theoretical orientation is best described as eclectic and integrative. We utilize brief, solution-focused therapy and acceptance, commitment therapy and are partial to empirically supported assessments and treatments. The needs of the patients we see vary immensely; some patients may need case management services and more close follow up, while others may be higher functioning and the focus can be on existential issues. Both faculty and interns use variable clinical techniques depending upon the patients' needs.

CVCH Mission, Values and History

Mission Statement

It is the mission of Columbia Valley Community Health to provide access to improved health and wellness with compassion and respect for all.

Values

Respect, Trust, Compassion, Integrity, Quality

Vision Statement

The vision of CVCH is to be the regional leader in providing a high quality, sustainable Healthcare Home in a teaching, growing environment.

History of CVCH

On January 11, 1972, a group of twenty-four concerned citizens gathered in a local restaurant with the common desire to find a way to alleviate the poor health conditions of people living in the service area. They voted to create a nonprofit organization known as the North Central Washington Migrant Health Project to address these health care needs. That April, they received their first grant of \$125,000 to serve Grant, Okanogan, Chelan, and Douglas counties. Early services included screenings by nurses in outreach vans in the orchards and along the roads. Night clinics were held in borrowed churches and offices by contracting with local physicians.

In the ensuing years, Okanogan and Grant counties developed their own community health centers. The organization's name changed to Columbia Valley Community Health, and services were expanded to include full-time providers and professional facilities. In addition to the medical program, the organization added Dental, WIC, and comprehensive maternity support services.

In the summer of 1998, CVCH moved to 600 Orondo Avenue where additional space allowed for expansion of services to include on site Pharmacy, Radiology, and Chronic Disease Management. In the summer 2001, the Board of Directors voted to expand CVCH clinic services to the Chelan-Manson community which were initiated in October 2001 then moved to a new site at 317 East Johnson Avenue in August 2002.

In 2012 the CVCH Wenatchee site was renovated to fill a new 15,000 sq. ft. clinic addition with 12 new medical exam rooms and eight state-of-the-art, completely digital dental operatories. CVCH also opened a new Express Care Medical Clinic across the river in East Wenatchee to provide the residents of Douglas County access to affordable services. In 2013 we further expanded our access by opening a new Adult Behavioral Health Clinic in East Wenatchee.

Columbia Valley Community Health continues to be one of the regional leaders in the management of migrant and Community Health, Behavioral Medicine, Behavioral Health and Dental. Community Health agencies from the Northwest often come tours the beautiful facilities and shadows our providers to take back improvement in management strategies.

Patient Population

For 40 years, Columbia Valley Community Health (CVCH) has served the low-income, uninsured, and migrant and seasonal farm worker populations of North Central Washington State as its Target Population.

About Wenatchee

Wenatchee is located at the confluence of the Wenatchee and Columbia rivers near the eastern foothills of the Cascade Mountain range in the State of Washington. Wenatchee is located in the center of the state approximately 170 miles west of Spokane and 148 miles east of Seattle. Unlike Seattle, the weather is arid and dry most of the year with moderate temperatures all year long. The city was named for the nearby Wenatchi Indian tribe. The name is a Salish word that means "river which comes [or whose source is] from canyons" or "robe of the rainbow."

Wenatchee is known as the "Apple Capital of the World" for the valley's many orchards, which produce apples enjoyed around the world along with cherries, pears, peaches, plums, nectarines, and apricots. Every year from the last week of April through the end of the first week of May, Wenatchee hosts the Washington State Apple Blossom Festival, which probably brings in the largest number of people Wenatchee sees annually, with the exception of all the migrant workers coming in to pick the crop.

The Wenatchee Valley and the surrounding areas provide an abundance of sports and recreational activities for any season. There are several facilities including the tennis club, an Olympic size swimming pool, an ice arena, several 18-hole and 9-hole golf courses, a 9-hole disc golf course, and countless baseball diamonds and soccer fields. There are lots of places to hike, fish and hunt, both birds and larger game. Boating and water recreation are also quite common. Many kayak, windsurf and water-ski on the Columbia. Whitewater rafting and inner-tubing is frequent on the Wenatchee River. In the winter, the mountains near Wenatchee provide great snowmobiling, sledding at Squilchuck State Park, as well as skiing and snowboarding at Mission Ridge. The city also offers a large system of parks and paved trails known as the Apple Capital Recreational Loop Trail. The 10-mile (20 km) loop which runs both banks of the Columbia River is used by cyclists, walkers, joggers, and skaters. In the winter cross country skiers and snowshoers also use the trail.

Doctoral Internship Grievance and Due Process Policy

Policy Title: Doctoral Internship Grievance and Due Process		Date Initiated: 10/26/09 Date Reviewed: 04/03/2018
Policy Number: D-BM-07	Department: Behavioral Medicine	
Departments Utilizing: Behavioral Medicine	Approved: Signatures on File <div style="text-align: center;"> Behavioral Health Director _____ Director of Internship Training _____ CEO _____ Board of Directors </div>	

Policy Statement/Purpose:

It is the policy of Columbia Valley Community Health (CVCH) to have a system in place for handling problematic behaviors with predoctoral interns and complaints or concerns that a pre-doctoral intern may have regarding the training program, evaluation procedures, due process challenges, etc., according to the guidelines as set forth by the American Psychological Association (APA) and Association of Psychology Postdoctoral and Internship Centers (APPIC).

Procedure

I. DUE PROCESS:

- A. Due process ensures that decisions made by CVCH about interns are not arbitrary or personally based, requires that the Director of Internship Training identify specific evaluative procedures which are applied to all trainees, and have appropriate appeal procedures available to the intern so he/she may challenge the program's action.

II. GRIEVANCE PROCESS:

- A. Ensures that decisions made by CVCH regarding complaints from or about interns are not handled arbitrarily. This requires that the Director of Internship Training identify specific procedures which are applied to all complaints or challenges and have appropriate appeal procedures available to the intern or staff member so he/she may challenge the decision.

III. SPECIFIC PROCEDURAL GUIDELINES

- A. All evaluation procedures and action plans are outlined in detail in the "Due Process and Grievance Procedural Guidelines" found in the Pre-Doctoral Internship Manual and on the CVCH Intranet.
- B. Grievance Procedure is a process that is invoked when an intern or staff member has a complaint against the training program or the intern. The procedural guideline includes specific steps an intern or staff member takes in the complaint process.

Doctoral Internship in Professional Psychology

Due Process and Grievance Procedural Guidelines

This document sets forth Columbia Valley Community Health (CVCH) guidelines for evaluation of interns, grievance procedures, and the management of problematic performance of conduct. The guidelines are consistent with accreditation standards of the American Psychological Association. The guidelines emphasize due process and assure fairness in the program's decisions about interns, and **they provide avenues of appeal that allow interns to file grievances and dispute program decisions.**

THE EVALUATION PROCESS

The Psychology Internship Program continually assesses each intern's performance and conduct. At biannual intervals, supervisors and clinical staff provide written evaluations and meet with the intern to discuss the assessments and offer recommendations. Meetings may occur more frequently based on identified need. Differences between intern's and supervisor's appraisals are expected to surface in these meetings, and in most cases are resolved. After meeting, the supervisor and intern sign the written evaluation and forward it to the Training Director. The Training Director obtains additional evaluation data through consultation with supervisors, physicians, and staff by phone or in person and talks with other professional staff that have significant contact with interns.

The Training Director, supervisors, and/or clinical staff periodically review as a group the evaluation data for each intern. This group meeting is chaired by the Training Director. In collaboration with the group, the Training Director combines the evaluations and provides interns with a summary evaluation of their progress in the program. Based on the evaluations and recommendations from the group, the Training Director and the intern may modify the intern's Training Plan or the Program itself, to better meet the Interns' training needs.

COMMUNICATION WITH INTERNS' HOME GRADUATE PROGRAMS

The Training Director communicates with each intern's sponsoring graduate program about the intern's activities and progress. Early in the year, the home graduate program receives information about the intern's training activities. At the end of the internship year, the home program receives a brief summary evaluation indicating whether the intern has successfully completed the internship. At any time, if problems arise that cast doubt on an intern's ability to successfully complete the internship program; the Training Director will inform the sponsoring graduate program. The home program will be encouraged to provide input to assist in resolving the problems.

DEFINITION OF PROBLEM

For purposes of this document intern problem is defined broadly as an interference in professional functioning, which is reflected in one or more of the following ways:

1. An inability and/or unwillingness to acquire and integrate professional standards into one's repertoire of professional behavior,
2. An inability to acquire professional skills in order to reach an acceptable level of competency, and/or
3. An inability to control personal stress, psychological dysfunctions, and/or excessive emotional reactions which interfere with professional functioning.

While it is a professional judgment as to when an intern's behavior becomes more serious (i.e., problematic) rather than just of concern, for purposes of this document a concern refers to a trainees' behaviors, attitudes, or characteristics which, while of concern and which may require remediation, are perceived to be unexpected or excessive for professionals in training. Problems typically become identified as problems when they include one or more of the following characteristics:

1. The intern does not acknowledge, understand, or address the problem when it is identified,
2. The problem is not merely a reflection of a skill deficit which can be rectified by academic or didactic training,
3. The quality of services delivered by the intern is sufficiently negatively affected,

4. The problem is not restricted to one area of professional functioning,
5. A disproportionate amount of attention by training personnel is required,
6. The trainee's behavior does not change as a function of feedback, remediation efforts, and/or time,
7. The problematic behavior has potential for ethical or legal ramifications if not addressed,
8. The intern's behavior negatively impacts the public view of the agency,
9. The problematic behavior negatively impacts the intern cohort.

Guidelines for Intern and Training Program Responsibilities

The Psychology Pre Doctoral Internship is designed as a General Internship and is seen as a component of the doctoral training process in Clinical/Counseling Psychology. Broadly, the Internship aims to provide the intern with the opportunity (in terms of setting, experience, and supervision) to begin assuming the professional role of a psychologist consistent with the practitioner-scholar model. This role entails the integration of previous training and a further development of the scientific, professional, and ethical bases involved in professional functioning.

I. Training Program's Expectation of Interns

The expectations of interns are divided into three areas:

- A. Knowledge of and conformity to relevant professional standards,
- B. Acquisition of appropriate professional skills, and
- C. Appropriate management of personal concerns and issues as they relate to professional functioning.

Each of these areas are described below:

A. Professional Standards

Interns are expected to:

1. Be cognizant of and abide by the guidelines as stated in the APA Ethical Principles of Psychologists and Code of Conduct, Standards for Providers of Psychological Services, Specialty Guidelines, and any other relevant, professional documents or standards which address psychologists' ethical, personal and/or legal responsibilities.
2. Be cognizant of and abide by the laws and regulations governing the practice of psychology as included in appropriate legal documents. Such documents include but are not necessarily limited to the Washington State Board of Examiners of Psychologists Law.

It is recognized by the training program that mere knowledge of and exposure to the above guidelines and standards are not sufficient. Interns need to demonstrate the ability to integrate relevant professional standards into their own repertoire of professional and personal behavior. Examples of such integration include a demonstrated awareness of ethical issues when they arise in work with clients, appropriate decision making in other ethical situations, and awareness of ethical considerations in their own and other's professional work.

B. Professional Competency

By the time the internship is complete, interns are expected to:

1. Demonstrate knowledge of psychopathology and of developmental, psychosocial and psychological problems.
2. Demonstrate knowledge of the special issues involved in working with a minority and disadvantaged population.
3. Demonstrate diagnostic skills and methods of diagnosis including psychological assessment, interview assessment, and consultation; with children, adolescents, and adults who are psychiatric patients or medical patients with stress related or psychiatric complications.

4. Demonstrate knowledge and skills in treatment, including psychotherapy (various modalities), case management, family therapy, group psychotherapy, crisis intervention, and medical consultation with children, adolescents, and adults.

The above competency expectations imply that interns will be making adequate progress in the above areas (as assessed by periodic evaluations) and that interns will achieve a level of competency by the completion of the internship which will enable them to successfully complete the internship and approaches the ability to function independently as a psychologist.

C. Personal Functioning

It is recognized by the training program that there is a relationship between level of personal functioning and effectiveness as a professional psychologist, most notably in one's role delivering direct services to clients. Physical, emotional and/or educational problems may interfere with the quality of an intern's professional work. Such problems include but are not limited to **a)** educational or academic deficiencies, **b)** psychological adjustment problems and/or inappropriate emotional responses, **c)** inappropriate management of personal stress, **d)** inadequate level of self-directed professional development, and **e)** inappropriate use of and/or response to supervision.

When such problems significantly interfere with an intern's professional functioning, such problems will be communicated in writing to the intern. The training program, in conjunction with the intern, will formulate strategies for ameliorating such problems and will implement such strategies and procedures. If such attempts do not restore the intern to an acceptable level of professional functioning within a reasonable period of time, discontinuation in the program may result. The specific procedures employed for the acknowledgment and amelioration of intern deficiencies will be described later in this document.

II. General Responsibilities of the Intern Program

A major focus of internship is to assist interns in integrating their personal values, attitudes and functioning as individuals with their professional functioning. The training program is committed to providing the type of learning environment in which an intern can meaningfully explore personal issues which relate to his/her professional functioning. In response to the above intern expectations, the training program assumes a number of general responsibilities. The responsibilities correspond to the three general expectation areas (Professional Standards, Professional Competency, Personal Functioning) and are described below:

A. The Training Program

1. The training program will provide interns with information regarding relevant professional standards and guidelines as well as providing appropriate forums to discuss the implementations of such standards.
2. The training program will provide interns with information regarding relevant legal regulations which govern the practice of psychology as well as providing appropriate forums to discuss the implementations of such guidelines.
3. The training program will provide written evaluations of the intern's progress with the timing and content of such evaluations designed to facilitate interns' change and growth as professionals. Evaluations will address the interns' knowledge of and adherence to professional standards, their professional skill competency, and their personal functioning as it relates to the delivery of professional services.

In accepting the above responsibilities, the internship program will maintain ongoing communications with the intern's graduate department regarding the trainee's progress during the internship year. The training program will provide appropriate mechanisms by which inappropriate intern behavior effecting professional functioning is brought to the attention of the intern. The training program will also maintain intern procedures, including grievance and due process guidelines, to address and remediate perceived

problems as they relate to professional standards, professional competency and/or professional functioning.

Intern Evaluation, Review, and Due Process Procedural Guidelines

I. The Evaluation Process

Interns are evaluated and given feedback throughout the year by their individual supervision in both formal and informal settings. Additionally, bi-annually, supervisors and clinical staff get together to discuss and evaluate interns' performance and makes recommendations for future needs in regards to training. Meetings may occur more often if they are deemed necessary based on an intern's performance in certain areas. The Intern Evaluation Form is completed by supervisors or clinical staff members prior to the bi-annual meeting on the intern's performance. The Training Director (TD), following each meeting, meets with the interns individually and gives them a full report of the evaluation of their performance and makes any recommendations and suggestions which are relevant.

Thus, the TD receives information from all supervisors, her own impressions and those of others who have had significant contact with the intern. This process is viewed as an opportunity for the TD to provide integrative feedback regarding the collective experience of others who have had significant interactions with the intern. Both parties discuss how the internship experience is progressing, and the intern is provided with the opportunity to give his/her reactions and critiques of supervisors and other aspects of the training experience. It may be in the context of this meeting or whenever during the rotation that a problem is identified that the TD and the intern may arrange for a modification of the intern's training program to address his/her training needs and/or the needs of the training program.

It is important that in the course of the internship the sponsoring university is kept apprised of the intern's training experience. The TD communicates with the sponsoring university twice a year regarding the intern's progress.

II. Initial Procedures for Responding to Inadequate Performance by an Intern (i.e. Intern Problem)

If an intern receives a rating of “5” (Not able to perform activity satisfactorily) in any area listed on the evaluation form from any of the evaluation sources, the following procedures will be initiated:

- A. The intern's supervisor will meet with the TD to discuss the rating and determine what action needs to be taken to address the issues reflected by the rating.
- B. The intern will be notified, in writing, that such a review is occurring and will have the opportunity to provide a statement related to his/her response to the rating.
- C. In discussing the inadequate rating and the intern's response, (if available) the TD may adopt any one or more of the following methods or may take any other appropriate action. She may issue a:
 1. **"Acknowledge Notice"** which formally acknowledges that:
 - a) The supervisor is aware of and concerned with the rating,
 - b) The rating has been brought to the attention of the intern,
 - c) The supervisor will work with the intern to specify the steps necessary to rectify the problem or skill deficits addressed by the rating, and
 - d) The behaviors associated with the rating are not significant enough to warrant serious action.
 2. **"Probation"** which defines a relationship such that the supervisors, clinical staff, and TD, actively and systematically monitor, for a specific length of time, the degree to which the intern addresses, changes and/or otherwise improves the behavior associated with the inadequate rating. The probation is a written statement to the intern and includes:
 - a) The actual behaviors associated with the inadequate rating,
 - b) The specific recommendations for rectifying the problem,

- c) The time frame for the probation during which the problem is expected to be ameliorated, and
- d) The procedures designed to ascertain whether the problem has been appropriately rectified, or

3. "Take no further action".

- D. The TD will then meet with the intern to review the action taken. If "Probation," the intern may choose to accept the conditions or may choose to challenge the action. The procedures for challenging the action are presented in the **"Internship Grievance Procedural Guidelines"** section below.
- E. If either the "Acknowledgment Notice" or the "Probation" action occurs, the TD will inform the intern's sponsoring university, indicating the nature of the inadequate rating, the rationale for the action, and the action taken by the supervisors and/or clinical staff. The intern shall receive a copy of the letter to the sponsoring university.
- F. Once the "Acknowledgment Notice" or "Probation" is issued by the TD, it is expected that the status of the rating will be reviewed no later than the next formal evaluation period or, in the case of probation, no later than the time limits identified in the probation statement. If the rating has been rectified to the satisfaction of the supervisor/s, the intern, sponsoring university and other appropriate individuals will be informed and no further action will be taken.

Internship Grievance Procedural Guidelines

I. Situations in which Grievance Procedures are Initiated

There are three situations in which grievance procedures can be initiated:

- A. When the intern challenges the action taken by the supervisor (Intern Challenge),
- B. When the supervisor is not satisfied with the intern's action in response to the action (Continuation of the Inadequate Rating), or
- C. When a supervisor initiates action against an intern (Intern Violation).

Each of these situations, and the course of action accompanying them, is described below.

A. "Intern Challenge". If the intern challenges the action taken by the supervisor as described in II of the "Intern Evaluation Due Process Procedure Guidelines", he/she must, within 10 days of receipt of the decision, inform the TD, in writing, of such a challenge.

- 1. The TD will then convene a Review Panel consisting of the Human Resources Director and two supervisors, clinical staff, or primary care physicians selected by the TD and two supervisors, clinical staff, or primary care physicians selected by the intern. The intern retains the right to hear all facts with the opportunity to dispute or explain his or her behavior.
- 2. A review hearing will be conducted, chaired by the TD, in which the challenge is heard and the evidence presented. Within 15 days of the completion of the review hearing, the Review Panel submits a written report to the HR Director, including any recommendations for further action. Decisions made by the Review Panel will be made by majority vote. The intern is informed of the recommendations.
- 3. Within 5 days of receipt of the recommendations, the HR Director will either accept the Review Panel's action, reject the Review Panel's action and provide an alternative, or refer the matter back to the Review Panel for further deliberation. The Panel then reports back to the HR Director within 10 days of the receipt of the HR Directors request for further deliberation. The TD then makes a decision regarding what action is to be taken and that decision is final.
- 4. Once a decision has been made, the intern, sponsoring university and other appropriate individuals are informed in writing of the action taken.

- B. Continuation of Inadequate Rating.** If the supervisor or clinical staff determines that there has not been sufficient improvement in the intern's behavior to remove the inadequate rating under the conditions stipulated in the probation, then a formal Review Panel will be convened.
1. The TD will communicate, in writing, to the intern that the conditions for revoking the probation have not been met. The supervisor may then adopt any one of the following methods or take any other appropriate action. This may include a:
 - a) Continuation of the probation for a specific time period,
 - b) Suspension whereby the intern is not allowed to continue engaging in certain professional activities until there is evidence that the behavior in question has improved,
 - c) Communication which informs the intern the TD is recommending that the intern will not successfully complete the internship if the behavior does not change within a specified period of time, and/or
 - d) Communication which informs the intern that the TD is recommending that the intern be terminated immediately from the internship program.
 2. Within 5 working days of receipt of this determination, the intern may respond to the action by:
 - a) Accepting the action or
 - b) Challenging the action.
 3. If a challenge is made, the intern must provide the TD, within 10 days, with information as to why the intern believes the action is unwarranted. A lack of reasons by the intern will be interpreted as complying with the sanction.
 4. If the intern challenges the action, a Review Panel will be formed consisting of the HR Director, TD, two supervisors, clinical staff members or primary care physicians selected by the TD, and two supervisors, clinical staff members or primary care physicians selected by the intern.
 5. A Review Panel hearing will be conducted" chaired by the TD, in which the challenge is heard and the evidence presented. Within 10 days of the completion of the review hearing, the Review Panel shall communicate its recommendation to the intern and to the HR Director. Decisions by the Review Panel will be made by majority vote.
 6. Within 5 days of receipt of the recommendations, the HR Director will either accept the Review Panel's action, reject the Review Panel's action and provide alternative action, or refer the matter back to the Review Panel for further deliberation. The Panel then reports back to the HR Director within 10 days of the receipt of the HR Director's request for further deliberation. The TD then makes a decision regarding what action is to be taken and that decision is final.
 7. Once a decision has been made, the intern, sponsoring university and other appropriate individuals are informed in writing of the action taken.
- C. Intern Violation.** Any supervisor or clinical staff member may file, in writing, a grievance against an intern for any of the following reasons:
1. Unethical or legal violation of professional standards or laws,
 2. Professional incompetence, or
 3. Infringement on the rights, privileges or responsibilities of others.
 - a) The TD will review the grievance with the HR Director and determine if there is reason to proceed and/or if the behavior in question is in the process of being rectified.
 - b) If the TD and HR Director determine that the alleged behavior in the complaint, if proven, would not constitute a serious violation the TD shall inform the clinical staff member who may be allowed to renew the complaint if additional information is provided.
 - c) When a decision has been made by the TD and the HR Director that there is probable cause for deliberation by the Review Panel, the TD shall notify the supervisor or clinical staff member

- and request permission to inform the intern. The supervisor or clinical staff member shall have five days to respond to the request and shall be informed that failure to grant permission may preclude further action. If no response is received within 5 days or permission to inform the intern is denied, the TD and the HR Director shall decide whether to proceed with the matter.
- d) If the intern is informed, a Review Panel is convened consisting of the HR Director, TD, two supervisors, clinical staff, or primary care physicians selected by the clinical staff member, and two supervisors, clinical staff, or primary care physicians selected by the intern. The Review Panel receives any relevant information from both the intern and supervisor/clinical staff member as it bears on its deliberations.
 - e) A review hearing will be conducted, chaired by the TD in which the complaint is heard and the evidence presented. Within 10 days of the completion of the review hearing, the Review Panel shall communicate its recommendation to the intern and to the HR Director. Decisions by the Review Panel shall be made by majority vote.
 - f) Within 5 days of receipt of the recommendation, the HR Director will either accept the Review Panel's action, reject the Review Panel's recommendation and provide alternative action, or refer the matter back to the Review Panel for further deliberation. The Panel then reports back to the HR Director within 10 days of the receipt of the HR Director's request for further deliberation. The TD then makes a decision regarding what action is to be taken and that decision is final.
 - g) Once a decision has been made the intern, clinical staff member, sponsoring university, and other appropriate individuals are informed in writing of the action taken.

II. Situations where interns raise a formal complaint or grievance about a supervisor, staff member, trainee, or program.

There may be situations in which the intern has a complaint or grievance against a supervisor, staff member, other trainee, or the program itself and wishes to file a formal grievance. The intern should:

- A. Raise the issue with the supervisor, staff member, other trainee, or Training Director in an effort to resolve the problem.
- B. If the matter cannot be resolved, or it is inappropriate to raise with the other individual, the issue should be raised with the Training Director. If the Training Director is the object of the grievance, or unavailable, the issue should be raised with the HR Director.
- C. If the Training Director cannot resolve the matter, the Training Director will choose an agreeable supervisor or clinical staff member acceptable to the intern who will attempt to mediate the matter. Written material will be sought from both parties.
- D. If mediation fails, the Training Director will convene a review panel (except for complaints against supervisors or clinical staff members where the grievance procedures for that person's discipline will be followed) consisting of the Training Director, the HR Director and two supervisors, clinical staff, or primary care physicians of the interns choosing. The Review Panel will review all written materials (from the intern, other party, mediation) and have an opportunity at its discretion to interview the parties or other individuals with relevant information. The Review Panel has final discretion regarding outcome.
- E. Nothing here precludes attempted resolution of difficulties by adjudication at a school or university level. These guidelines are intended to provide the psychology intern with a means to resolve perceived conflicts that cannot be resolved by informal means. Interns who pursue grievances in good faith will not experience any adverse personal or professional consequences.

Remediation Considerations

It is important to have meaningful ways to address a problem once it has been identified. Several possible, and perhaps concurrent courses of action designed to remediate problems include but are not limited to:

1. Increasing supervision, either with the same or other supervisors,
2. Changes in the format, emphasis, and/or focus of supervision,
3. Recommending and/or requiring personal therapy in a way that all parties involved have clarified the manner in which therapy contacts will be used in the intern evaluation process.
4. Reducing the intern's clinical or other workload and/or requiring specific academic coursework, and/or
5. Recommending, when appropriate, a leave of absence and/or a second internship.

When a combination of the above interventions do not, after a reasonable time period, rectify the problem, or when the trainee seems unable or unwilling to alter his/her behavior, the training program may need to take more formal action, including such actions as:

1. Giving the intern a limited endorsement, including the specification of those settings in which he/she could function adequately,
2. Communicating to the intern and academic department/program that the intern has not successfully completed the internship, with the possibility of continuing the year as a practicum placement.
3. Recommending and assisting in implementing a career shift for the intern, and/or
4. Terminating the intern from the training program.

All the above steps need to be appropriately documented and implemented in ways that are consistent with due process procedures.

Due Process: General Guidelines

Due process ensures that decisions made by programs about interns are not arbitrary or personally based, requires that programs identify specific evaluative procedures which are applied to all trainees, and have appropriate appeal procedures available to the intern so he/she may challenge the program's action.

General due process guidelines include:

1. Presenting interns' in writing, with the program's expectations related to professional functioning,
2. Stipulating the procedures for evaluation, including when and how evaluations will be conducted. Such evaluations should occur at meaningful intervals,
3. Articulating the various procedures and actions involved in making decisions regarding a problem,
4. Communication, early and often, with graduate programs about any suspected difficulties with interns, seeking input from these academic programs about how to address such difficulties,
5. Instituting, with the input and knowledge of the graduate program, a remediation plan for identified inadequacies, including a time frame for expected remediation and consequences of not rectifying the inadequacies,
6. Providing a written procedure to the intern which describes how the intern may appeal the program's action,
7. Ensuring that interns have sufficient time to respond to any action taken by the program,
8. Using input from multiple professional sources when making decisions or recommendations regarding the intern's performance, and
9. Documenting, in writing and to all relevant parties, the action taken by the program and its rationale.

Summary of Benefits- 2018

Behavioral Medicine Intern

Coverage below based on a 1.0 FTE; Medical, Dental, Paid Leave, Holidays are prorated based on FTE

Benefit:	Coverage:	Effective:
Annual Stipend	\$30,160 per year	Paid on a bi-weekly basis.
Medical Self-Insured (administered by EBMS); Preferred Provider Network is First Choice Health	Employee covered – 100% Dependents covered – 50%	First of the month following first date of employment.
Dental Washington Dental	Employee covered – 100% Dependents covered – 50%	First of the month following first date of employment.
Paid Leave	3 weeks (120 hours)	PTO is available immediately following the date of hire. PTO requests must be approved by your supervisor. No payment will be made for unused PTO at the time of termination/resignation.
Holidays	88 hours related to: New Year's Day Martin Luther King (float) Presidents Day (float) Memorial Day 4 th of July Labor Day Thanksgiving & Day After Christmas Eve Christmas Day Employee Birthday (float)	Holidays are based on an 8-hour day and paid based on the calendar year (January 1 through December 31). Holiday hours will be prorated based on remaining holidays for an initial partial year; and "floating holidays" will be provided as outlined below: Start date January 2 – May 1 = 2 float days (16 hours) Start date May 2 – September 1 = 1 float day (8 hours) Start date September 2 – December 31 = 0 float days for the current year with all 3 awarded January 1 for the following year.
403(b) Retirement Plan Lincoln Financial	150% CVCH match up to 3% of the employee's contribution	Immediately. Vesting schedule: 20% at 2 years, 50% at 3 years, 60% at 4 years, and 100% at 5 years.
Long-term Disability Mutual of Omaha	Employee Only (variable)	First of the month following 90 days of employment.
Basic Term Life Mutual of Omaha	Employee Only (1x annual salary, up to \$200,000)	First of the month following 90 days of employment.
Group Accidental Death and Dismemberment (AD&D) Mutual of Omaha	Employee Only (1x annual salary, up to \$200,000)	First of the month following 90 days of employment.

Benefit:	Coverage:	Effective:
Supplemental Term Life Mutual of Omaha	Employee / Spouse / Dependent(s)	First of the month following the first date of employment.
Voluntary AD&D Mutual of Omaha	Employee / Family	First of the month following the first date of employment.
Health Reimbursement Arrangement Administered by Allegiance	Reimbursement for medical, dental, mental health and prescription out of pockets costs incurred at CVCH, up to \$500 per family per year.	First of the month following the first date of employment.
Flex Plan: Medical Administered by Allegiance	Flex Plan: Maximum \$2,600 per year Direct Deposit available	First of the month following the first date of employment.
Flex Plan: Dependent Care Administered by Allegiance	Flex Plan: Maximum \$5,000 per year Direct Deposit available	First of the month following the first date of employment.
Worx Gym (Wenatchee & East Wenatchee)	Employee covered – 100% Dependent(s) eligible to enroll. Monthly cost: <ul style="list-style-type: none"> • +1 Dependent \$27.05 • +2 Dependent \$16.23 +3 Dependent \$16.23	Immediately. Once employee has submitted enrollment form to Worx Gym
True Fitness (Chelan & Manson)	Employee covered- 100% Dependent(s) eligible to enroll. Please see gym for cost.	Immediately. Once employee has submitted enrollment form to True Fitness
Cell Phone Discounts	Discounted monthly access fees Discounted select accessories and special equipment	Available for personal cell phones.

Any questions regarding benefit eligibility or coverage should be directed to the Human Resources Department.
CVCH benefits are subject to change at Management's discretion and upon approval of the CVCH Board of Directors.

Behavioral Medicine Internship Program Consultation Protocol

This protocol is designed to assist Behavioral Medicine Interns in determining the need for consultation with a supervisor or BMed Provider. Consultation should be viewed as a normal part of patient care and treatment planning.

It is important to seek out the assistance from supervisors during supervision or consultation when:

- There is an obvious transference or counter transference issue with the patient
- The patient is not making any progress towards treatment goals in the past 2-3 visits
- The patient has a diagnosis or presenting issue/s that the provider is not comfortable/competent treating
- The patient has unclear or unrealistic expectations of treatment
- You are seeing someone else in their immediate family as a patient
- Ethical issues (dual relationships, gift giving, etc.)
- Issues involving legal issues beyond normal care and requests (Dept. Of Corrections, Child Protective Services, court ordered treatment, etc.)

Need for immediate supervision or consultation:

- If a patient has had an attempted suicide or suicidal gesture (not including superficial cutting) in the past month.
- If a patient was seen by the Designated Crisis Responder (DCR) within the past week for suicidal ideation or unknown reasons AND continues to present with significant/concerning symptoms.
- If the patient was released from an inpatient stay within the past week AND continues to have thoughts about self-harm.
- If a patient denies suicidal thinking but you are not convinced you have all of the information AND that the patient will remain safe.
- There are obvious legal issues that are presenting during the appointment (patient threatening to sue the clinic, patient requesting a supervisor, etc.).
- You feel threatened or unsafe with the patient.
- Threatening harm to a specific third party AND planning to act on (Homicidal ideation)
- Any other patient issues/concerns you may have that require immediate consultation

Policy Title: Doctoral Intern- Evaluation of Progress		Date Initiated: 08/24/2012
		Date Revised: 2/24/2016
Policy Number: D-BM-08	Department: Behavioral Medicine	
Departments Utilizing: Behavioral Medicine	Approved: <div style="text-align: center;"> Signatures on File <hr/> <div style="display: flex; justify-content: space-between;"> Behavioral Health Director Date </div> <hr/> <div style="display: flex; justify-content: space-between;"> Director of Internship Training Date </div> <hr/> <div style="display: flex; justify-content: space-between;"> CEO Date </div> </div>	

POLICY STATEMENT/PURPOSE/OVERVIEW:

It is the policy of Columbia Valley Community Health (CVCH) to ensure the timely written evaluation of all interns' progress along with feedback from the Director of Internship Training.

The purpose of this policy is to ensure that services and procedures related to patient care are emphasized and maximized at all times. This policy provides interns with a structure for timely feedback and guidance in order to fully prepare their skill sets.

I. EVALUATION OF INTERNS:

- A. CVCH will utilize the Five-point Likert Scale as the primary evaluation tool (see Appendix A). This scale specifies that interns will be expected to meet a minimal benchmark of Level (2) when coming into the program. Interns will then be expected to reach Level (3) by their mid-year formal evaluation. Upon completion of the CVCH Internship Program, the intern will be expected to reach Level (4). This schedule represents a demonstrable and documented level of progression through the Internship Program. These evaluations will allow CVCH and the interns to monitor their growth and progress, and to make any needed corrections timely. This will also ensure maximum success for both CVCH and the interns.
- B. Evaluations of competency areas will normally occur twice during the internship year. Incoming interns will be expected to score a minimum of Level (2) on the Likert Scale to participate in the CVCH Program. It is expected that interns will receive a score of Level (3) (or higher) on the Likert Scale for competency areas on the Mid-Year Intern Evaluation. The Final Intern Evaluation is expected to be Level (4) (or higher) on most core competencies. Evaluations will be given mid-year and end of year, unless there are notable deficits that require accelerated remediation. This evaluation schedule is designed to show a positive progression of growth and ability for all interns during their tenure.
 1. Areas of Concern:
 - a. Any competency area(s) marked as a Level (2) on the Likert Scale for the intern's Mid-Year Evaluation is an area of concern. Level (2) is the expected minimum that a potential intern candidate should be scored at prior to beginning the Intern Program. A score of Level (3) will be expected at the mid-year point, although some variation in performance is

Page 1 of 3

expected depending upon the intern's previous experience. The intern's awareness of the concerns and the need for improvement should be noted if they score a Level(3) at midpoint of the training year. Improvements may be necessary sooner if documented in supervision notes. This area will be highlighted during supervision with the intern and a plan to assist the intern in remedying the score will be made and documented. If the intern is not making progress and is not receptive to improving performance, then that area will be considered a deficit.

- b. The intern will be expected to have progressed in development to Level (4) on the Likert Scale by the end of the internship year. Any progression necessary to meet this level will be highlighted during supervision with the intern. An improvement plan may assist the intern to modify their scores, these plans should be documented. If the intern is not showing progress in advancing to a score of Level (4) for final evaluation, or is not receptive to improved performance, then the intern's performance will be considered a deficit.
2. Deficits or Problematic Behaviors in Competency Areas:
 - a. Deficit or problematic behavior is defined as any score of Level (1) on the 5-point Likert Scale. This includes any areas of the initial assessment or at any time going forward, including the Mid-Year Intern Evaluation. Any identified deficit shall be documented on the Intern Evaluation Form. The form will be completed and feedback communicated to the intern and documented appropriately. Any areas of deficit will be brought to the intern's attention and documented at the soonest opportunity. If notable deficits still exist after the intern has received documented individual supervision, a "Written Acknowledgement" will be provided. The process outlined in the "Internship Grievance" Procedure will be followed, with an evaluation every 3 months on the specified area of deficit. In the event that the deficit is not corrected, the "Doctoral Internship Grievance and Due Process" Policy #D-BM-07 will be enacted.
 3. If no notable deficits are identified through supervision and shadowing by the sixth month of internship, interns will receive written evaluations on the typical schedule of mid and final evaluation.
- C. Formal communication will be provided as a 'Verbal Warning,' on any deficits or problematic behaviors identified (1 on the 5-point Likert Scale) on the Intern Evaluation during any meeting with the Director of Internship Training or designee.
 1. Any specific training needs that are identified to correct deficits or problem areas will be provided in writing to the intern and to the home doctoral program within one week of the meeting.
 - a) Steps to correct the area/s of concern will be clearly listed along with expected timelines.
 - b) A minimum of twice monthly meetings will occur to specifically address identified areas and review progress towards goals. This is in addition to regularly scheduled supervision.
 - (1) Meetings will cease when all areas have been successfully remedied.
 - (2) Meetings will be weekly if issues persist.
 - (3) Patient care will cease if patient safety is an area of concern.

D. Major Areas of Concern (including Patient Safety):

1. Issues not resolved by using the steps above, will then be addressed by the Doctoral Internship Grievance and Due Process Policy #D-BM-07. This policy clearly states the necessary process and can also be found in the Internship Manual.

II. **EVALUATION DATA**

- A. All proximal, distal and end of year evaluation data will be collected and used to track the training program progress.

APPENDIX A:

Five-Point Likert Scale

(1) **BELOW EXPECTATIONS**

The intern is performing significantly below expectations and a remediation plan is required.

(2): **DEVELOPING**

The intern requires some direct observation while engaged in a clinical task or requires some instruction and monitoring to ensure that the task is performed and documented satisfactorily. This rating is expected of incoming interns on most core competencies.

(3): **MEETS EXPECTATIONS**

The intern has mastered most basic skills and has shown consistent professional growth. Moderate supervision is provided with less need for instruction and monitoring. This rating is expected of mid- year interns on most core competencies.

(4): **PROFICIENT/ADVANCED**

The intern's skills are more advanced and supervision is mostly consultative in nature. This rating is expected at the final end-of-the- year evaluation on most core competencies.

(5): **OUTSTANDING PERFORMANCE/PROFESSIONAL GRADE**

The intern has superior skills and has the ability to perform the tasks autonomously. This rating is the goal of postdoctoral psychologists.

Intern Name: _____

Period Covered: _____

Check One:

☐ Initial ☐ 3 Months ☐ 6 Months ☐ 9 Months ☐ Final

Supervisors:

Dominika Breedlove, Psy.D.; Misha Whitfield, Psy.D.; [POST-DOC NAME & CREDENTIALS]

Methods of Observation:

☐ Discussion ☐ Meetings ☐ Co-therapy
☐ Group ☐ Shadowing ☐ Seminar
☐ Case Material(s) ☐ Other (specify):

Evaluation is a collaborative process designed to facilitate and pinpoint areas of strength and areas to improve. It should serve as a vehicle for change in defining goals and evaluating performance. Please complete this evaluation form evaluating your intern's skill, competence, and performance using the following rating scale:

(1) Below Expectations

The intern is performing significantly below expectations and a remediation plan is required.

(2) Developing

The intern requires some direct observation while engaged in a clinical task or requires some instruction and monitoring to ensure that the task is performed and documented satisfactorily. *This rating is expected of incoming interns on most core competencies.*

(3) Meets Expectations

The intern has mastered most basic skills and has shown consistent professional growth. Moderate supervision is provided with less need for instruction and monitoring. *This rating is expected of mid-year interns on most core competencies.*

(4) Proficient / Advanced

The intern has mastered most basic skills and has shown consistent professional growth. Moderate supervision is provided with less need for instruction and monitoring. *This rating is expected of mid-year interns on most core competencies.*

(5) Outstanding Performance / Professional Grade

The intern has superior skills and has the ability to perform the tasks autonomously. *This rating is the goal of postdoctoral psychologists.*

N/A Not Applicable

I. ASSESSMENT	1	2	3	4	5	N/A
Demonstrates comprehensive understanding of the current diagnostic systems, such as the DSM/ICD, including differential diagnoses						
Quickly and efficiently identifies the presenting problem, degree of functional impairment, and symptoms using focused interviewing and diagnostics skills required in the integrated primary care setting						
Able to gather and integrate information from multiple sources and formulate a well-rounded biopsychosocial conceptualization in oral and written communication						
Understands how biological, social, and psychological factors influence health and illness, e.g., Demonstrates understanding of the human behavior within its context						
Able to conduct and interpret brief screenings common in the integrated primary care setting						
Proficient in the selection, administration, and interpretation of <i>assigned</i> psychological testing and report writing						
Overall Assessment Rating	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	N/A <input type="checkbox"/>
II. INTERVENTION & TREATMENT	1	2	3	4	5	N/A
Is able to develop rapport and form effective therapeutic alliance with the patient						
Collaboratively develops treatment plans matched to the patient's level of symptom severity <i>and</i> motivation for treatment/behavior change						
Effectively applies relevant evidence-based interventions and treatment approaches to a wide range of presenting issues across the continuum of health and illness						
Is able to work effectively with the patient toward the resolution of presenting problems						
Is able to be flexible and adapt and change interventions and treatment goals to be consistent with an ongoing evaluation						
Was able to serve as an effective group therapy leader or co-leader						
Overall Intervention and Treatment Rating	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	N/A <input type="checkbox"/>

III. ETHICAL-LEGAL STANDARDS & CONDUCT	1	2	3	4	5	N/A
Demonstrates comprehensive knowledge of and adheres to APA ethical guidelines and WA state laws that pertain to psychologists/psychology interns						
Follows laws related to confidentiality, informed consent, boundary issues, and professional relationships and team functioning, and other legal and ethical issues common in the integrated primary care setting						
Practices appropriate documentation and billing						
Shows awareness of the complexities involved in ethical decision-making, e.g., Shows critical thinking skills and utilizes supervision and consultation as needed						
Overall Ethical-Legal Standards & Conduct Rating	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	N/A <input type="checkbox"/>
IV. PROFESSIONAL VALUES, ATTITUDES, & BEHAVIORS	1	2	3	4	5	N/A
Demonstrates appropriate professional demeanor & behavior						
Exhibits emotional maturity and integrity, and demonstrates appropriate respect for the welfare of others						
Is aware of professional limitations and need for consultation, e.g., exhibits a level of independence and autonomy appropriate to the level of training						
Completes commitments in a prompt and professional manner, e.g., Time management and organizational skills						
Able to maintain professionalism despite personal issues and stressors						
Demonstrates appropriate self-awareness, self-care, and stress management skills						
Overall Professional Values, Attitudes, & Behaviors Rating	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	N/A <input type="checkbox"/>
V. COMMUNICATION & INTERPERSONAL SKILLS	1	2	3	4	5	N/A
Is able to produce oral and written communications that are clear, concise, informative, and well-integrated						
Demonstrates professional language and manages all communications at the level expected of an intern/psychologist-in-training						
Is able to form and maintain good working relationships with peers, supervisors, other providers, and staff						

Demonstrates effective conflict resolution skills and manages differences of opinion and other challenging interactions and communications; effectively repairs relationship ruptures when they occur						
Overall Communication & Interpersonal Skills Rating	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	N/A <input type="checkbox"/>
VI. CONSULTATION & INTERPROFESSIONAL/INTERDISCIPLINARY SKILLS	1	2	3	4	5	N/A
Understands the different roles on the team, and values the contributions of all team members						
Understands one's role and functioning as a BHC in the integrated primary care system, e.g., Demonstrates understanding that patient care is the responsibility of a team of professionals, not a single clinician						
Effectively determines the situations that require different role functions and is able to shift and adjust accordingly to meet the changing needs of patient and the team						
Is able to answer the referral question competently, thoroughly, and effectively, and offers appropriate recommendations to team members						
Engages in effective care coordination as needed, e.g., is able to appropriately engage providers on the team, other departments, and outside providers, agencies, and systems of care as needed						
Overall Consultation & Interprofessional/Interdisciplinary Skills	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	N/A <input type="checkbox"/>
VII. INDIVIDUAL & CULTURAL DIVERSITY	1	2	3	4	5	N/A
Recognizes the impact of individual and cultural diversity on health and wellness, and tailors assessment, intervention, and treatment planning accordingly						
Uses supervision, reading, and additional training when caring for an unfamiliar population						
Acknowledges and respects differences that exist between self, patients, and co-workers, and others in terms of gender, race, ethnicity, sexual orientation, SES, and other cultural and diversity factors						
Shows awareness, sensitivity, and respect for differences in the marginalized populations						
Demonstrates a commitment to CVCH's mission to "Provide access to improved health and wellness with compassion and respect for all"						
Overall Individual & Cultural Diversity Rating	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	N/A <input type="checkbox"/>

VIII. SUPERVISION	1	2	3	4	5	N/A
Effectively uses consultation and supervision to advance one's learning and work toward identified professional goals						
Arrives to supervision prepared to discuss relevant issues; takes initiative and ownership of the agenda while accepting supervisor guidance as needed						
Is open and receptive to feedback and responds positively to being challenged and critiqued as an opportunity for learning and growth						
Understands the boundaries of supervisory relationship; is able to talk through potential conflicts, miscommunication, or relationship ruptures with supervisor guidance						
Overall Supervision Rating	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	N/A <input type="checkbox"/>

IX. APPLICATION OF RESEARCH TO CLINICAL PRACTICE	1	2	3	4	5	N/A
Applies scientific literature to clinical practice. Application is evident in conceptualization, treatment planning, and evidence-based interventions						
Demonstrates curiosity, enthusiasm, and critical thinking skills when evaluating and disseminating research or other scholarly activities, e.g., case conference, presentations, publications at the local, regional, or national level						
Regularly consults relevant scholarly literature to advance one's knowledge and disseminate it to peers and colleagues in an appropriate manner						
Overall Application of Research To Clinical Practice Rating	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	N/A <input type="checkbox"/>

Summary Rating:

Please indicate by checking the corresponding number, which statement best represents this intern's overall rating based on your competency indicator ratings above:

- ☐ 1: Below Expectations
- ☐ 2: Developing
- ☐ 3: Meets Expectations
- ☐ 4: Proficient / Advanced
- ☐ 5: Outstanding Performance / Professional Grade

EMPLOYMENT HISTORY

What was your first post-internship employment setting? (please use employment codes on page 4 - for example, "6 – general hospital")

What was your first job title?

Are you currently employed in the field of psychology? Yes ☐ no ☐

If yes, what is your current employment setting? (please use employment setting codes on page 4, e.g., "6- general hospital"):

Title of present position:

If not employed in the field of psychology, please describe how you are devoting your time:

LICENSURE STATUS

Are you currently licensed? Yes ☐ No ☐

If yes: When did you receive your license?

Which state(s) are you licensed in?

Have you had any complaints to the licensing board? Yes ☐ No ☐

If yes, please explain and provide the outcome:

If not licensed, what is your plan regarding licensure?

PROFESSIONAL CHARACTERISTICS/QUALITIES

Did you complete a postdoctoral fellowship?

Yes ☐ No ☐

Do you hold a membership in a professional psychological organization (e.g., APA)?

Yes ☐ No ☐

Please list any professional achievements (e.g., fellow status, diplomat, leadership position, etc.).

Have you presented at a professional conference since you finished internship?

Yes ☐ No ☐

Have you authored or co-authored a journal article, book chapter since you finished internship?

Yes ☐ No ☐

Do you currently provide clinical supervision?

Yes ☐ No ☐

Do you use evidence-based practice in your work setting?

Yes ☐ No ☐

INTERNSHIP EVALUATION

Please rank your overall satisfaction with your internship at the CVCH Behavioral Medicine Department by marking one of the categories below:

- | | |
|-----------------------|--------------------------|
| Very satisfied | <input type="checkbox"/> |
| Somewhat satisfied | <input type="checkbox"/> |
| Neutral/Unsure | <input type="checkbox"/> |
| Somewhat dissatisfied | <input type="checkbox"/> |
| Very dissatisfied | <input type="checkbox"/> |

The internship has identified twenty competency areas for interns during the internship. The program would like your input to determine how successful it was in each of these competency areas and also how important these areas are in your work as a psychologist.

Rating key:

- | | |
|------------------------|---------------------------------------|
| 5: Highly Successful | 5: Highly Important |
| 4: Mildly Successful | 4: Mildly Important |
| 3: Neutral | 3: Neutral |
| 2: Mildly Unsuccessful | 2: Mildly Unimportant |
| 1: Highly Unsuccessful | 1: Useless to the field of Psychology |

	Program Met Goal	Importance of Goal for Psychologists
GOAL 1: Assessment, Diagnosis, and Consultation Competencies		
Knowledge and skills in clinical interviewing which includes safety assessment and contingency planning.		
Knowledge and skills in test selection and administration.		
Knowledge and skills in clinical interpretation of interview and test data.		
Ability to formulate accurate diagnoses.		
Ability to communicate assessment findings and recommendations in a written format.		
GOAL 2: Competency in Intervention, Treatment, and Therapy		
Ability to appropriately conceptualize cases and develop intervention plans specific to patient needs.		
Ability to develop good rapport with a variety of patients, collaboratively plan treatment goals, and address safety issues.		
Ability to effectively apply a variety of interventions that are effective and consistent with empirically supported treatments.		
Ability to evaluate treatment progress and terminate therapeutic interventions when appropriate.		
Ability to appropriately facilitate group therapy interventions.		
GOALS 3 & 4: Foundational Ethical & Multicultural Competencies		
Adherence to professional values and a concern for the welfare of others.		
Knowledge and application of ethical principles.		
Professional and appropriate interaction with treatment teams, peers and supervisors.		
Responsible performance of key patient care tasks which includes producing timely and high quality work.		

Management of personal and professional stressors such that professional functioning is maintained.		
Maintains awareness and sensitivity to diversity issues and individual differences.		
GOAL 5: Specialty Skill & Scholarly Practice		
Is able to critically analyze research and apply it appropriately to clinical practice.		
Knowledge and skills of consultation.		
Knowledge and skills of program evaluation.		
Knowledge and skills of providing supervision.

INTERNSHIP ADMISSIONS, SUPPORT, AND INITIAL PLACEMENT DATA

09/11/18

Internship Program Admissions

Briefly describe in narrative form important information to assist potential applicants in assessing their likely fit with your program. This description must be consistent with the program's policies on intern selection and practicum and academic preparation requirements:

Columbia Valley Community Health pre-doctoral internship program offers an in-depth training experience in clinical psychology and health psychology services at a community medical center, a Patient-Centered Medical Home which utilizes the Integrated Primary Care Model. Prior academic and/or clinical experience in health psychology or a medical setting is desirable but is *not* required to apply to our program. We welcome applications from candidates who are interested in training opportunities and professional practice in the following areas: Integrated healthcare, health psychology, multidisciplinary consultation, chronic illness management, cultural diversity and work with underserved populations, and trauma-informed care. To apply, please follow the APPIC guidelines of submitting information via the APPIC Portal for our training site.

Does the program require that applicants have received a minimum number of hours of the following at time of application? If yes, indicate how many

Total Direct Contact Intervention Hours	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes	Amount:0
Total Direct Contact Assessment Hours	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes	Amount:0

Describe any other required minimum criteria used to screen applicants:

All candidates that will be considered must have a Master's degree in psychology, mental health counseling, social work, marriage and family therapy, or another related field and must be eligible for Master's level licensure in Washington State as a **Licensed Mental Health Counselor (LMHC)**, **Licensed Advanced Social Worker (LASW)**, **Licensed Independent Clinical Social Worker (LICSW)**, or **Licensed Marriage and Family Therapist (LMFT)**. In order to apply with us, you only need to be **license-eligible** by the time you match with our program. If you match with us, our agency will provide extensive support in obtaining the required licensure.

See the DOH Mental Health Professions website for more details:

Financial and Other Benefit Support for Upcoming Training Year

Annual Stipend/Salary for Full-time Interns	\$30,160	
Annual Stipend/Salary for Part-time Interns	n/a	
Program provides access to medical insurance for interns?	<input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes
If access to medical insurance is provided:		
Trainee contribution to cost required?	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes
Coverage of family member(s) available?	<input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes
Coverage of legally married partner available?	<input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes
Coverage of domestic partner available?	<input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes
Hours of Annual Paid Personal Time Off (PTO and/or Vacation)	120	
Hours of Annual Paid Sick Leave	0 (included in PTO)	
In the event of medical conditions and/or family needs that require extended leave, does the program allow reasonable unpaid leave to interns/residents in excess of personal time off and sick leave?	<input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes

Other Benefits (please describe):

CVCH Covers the following benefits at 100% (employee only):

Dental insurance
Vision (Part of Medical plan)
Long Term Disability
Group Term Life
Accidental Death and Dismemberment (AD&D)
Health Reimbursement Account (HRA)
Gym membership

Voluntary Benefits:

403(b) Retirement Plan
Supplemental Life (Employee, Spouse, & Child)
Voluntary AD&D,
Flex Plan for Medical and Dependent Care
Cell Phone Discounts
Licensing fees/renewal fee reimbursement

Initial Post-Internship Positions

Comments from Past Interns

Daisy Rivera, LMHC

Psy.D. – William James College

Doctoral Intern: 2017-2018

My year as a Behavioral Medicine Pre-Doctoral intern was a challenging but rewarding time that helped me to grow both personally and professionally. I chose to come to Columbia Valley Community Health because of the diverse population and integrated model of care. I have a passion for working with the Latino population and having worked in integrated models in the past, my experience was that it provided more opportunity to increase access, provided increased cohesive and collaborative whole-person care, and prevented patients from falling through the cracks. I was immediately impressed with the relationships between the medical providers and the behavioral medicine providers at CVCH, as I had never seen medical providers extend such level of respect and receptiveness to the opinions of behavioral medicine consultants, and likewise had never seen behavioral medicine consultants feel so comfortable in their consultation without the fear of “stepping on toes”. The integrated working environment was absolutely fast-paced and definitely brought about very challenging cases, but the supportive environment and the strong working relationships between providers across disciplines made the challenging cases easier to handle.

The training at CVCH was very diverse and helped me to develop more confidence as a provider than I have ever had. I learned so much more about the intersection of medical and psychological problems. I also had the amazing opportunity to learn more about psychopharmacology and obtained enough knowledge and understanding about it to feel comfortable making medication recommendations to PCP’s. Furthermore, I became much more confident in my psychological assessment/testing report writing.

A major contributor to my professional and personal growth throughout the year was the wonderful supervision I received. Supervision was very different with each supervisor, but they each created a safe space and learning environment, allowed for repairing of past negative supervisory experiences, and supported our individual interests. CVCH definitely met and exceeded my expectations for my internship year and provided me with tools that I will carry with me throughout my career.

Melissa Reilly

Psy.D. – Antioch University, Santa Barbara

Doctoral Intern: 2017-2018

I chose Columbia Valley Community Health for the integrated model of care and fast paced environment. I felt as though this type of setting would challenge and improve upon my clinical skills. I am able to say I have gained a greater understanding in treating the individual as a “whole.” CVCH has given me the opportunity to work collaboratively with other professionals, in their chosen field, to meet the needs of each individual patient and the demand of a growing population. Each patient is different with a vast array of issues ranging from complex chronic pain management to substance use issues, crisis stabilization, and ongoing therapy. The days vary greatly and there’s always opportunity to challenge yourself or step out of your comfort zone.

I am also appreciative of the greater learning opportunities presented here. For instance, I presented three didactics, a complex case presentation, and sat on different committees and coalitions during my time here. There’s plenty of opportunity for these types of activities but squeezing in the time can be a difficult balance.

Lastly, the quality of training and supervision I have received from Dr. Breedlove, Dr. Whitfield, and AnnMarie Batdorf, have been beyond any expectations. These supervisors have challenged and pushed me to both clinical and personal excellence while offering a supportive and caring environment. They have always taken the time to ensure the appropriate training needs are met and have specifically tailored aspects of the internship to meet personal growth goals throughout the year. CVCH has exceeded my expectations for internship and has prepared me well for the challenges that face me in this career.

AnnMarie Batdorf, LMHC

Psy.D. – Capelle University

Doctoral Intern: 2016-2017

My experience as a pre-doctoral intern at CVCH was incredible in that I gained a greater understanding of the bio-psychosocial model as well as, I fell in love with the integrated model of patient care. Coming from a long term private practice my time as an intern was an eye opening experience due to the exposure to such a wide variety of patients and their various issues and needs. Working alongside medical providers greatly improves the patients confidence in their care and they appreciate the team approach to getting their needs met. Learning to work with whole patient care including medical issues, psychopharmacology and mental health issues truly does provide the best care possible. It is a fast paced and exciting environment. The high quality of supervision I received consistently along with an amazing support staff made the more difficult days go as smoothly as possible. It is a wonderful learning environment and creates an opportunity for personal and professional growth.

Joshua Ventura, LMHC

Ph.D. – Biola University, La Mirada, CA

Doctoral Intern: 2015 -2016

After having completed a one-year pre-doctoral internship with CVCH, I am able to say that I have gained perspective and appreciation for aspects of my patients' experience that I previously left untouched. The integrated model has helped me to fill in my understanding of the biopsychosocial approach to treatment and apply interventions that focus on a wide breadth of needs. Several of the highlights of the program include its emphasis on understanding the impact of medical comorbidities on psychological health, psychopharmacology, and a brief model of care alongside primary care physicians in a primary care setting.

I am deeply appreciative to have had this experience and much more appreciative for the support that I received from Dr. Breedlove and Dr. Whitfield. Their passion, humor, and mentorship will not be forgotten; neither will the "tinga" provided by support staff.

Christine Wineberg, LMHC

Psy.D. – Immaculata University

Doctoral Intern: 2015-2016

My year as a pre-doctoral intern at CVCH was an incredible opportunity to internalize the integrated behavioral medicine model and develop my skills as a consultant in a primary care setting. I fell in love with the diverse opportunities presented in a family practice clinic which serves patients across the lifespan and found working alongside providers with so many areas of expertise invigorating. The integrated model is well established here and there is a robust commitment to training. This commitment is communicated and practiced by the administration, providers and all staff and created a supportive environment that remained steady throughout the year.

This year was also a tremendous personal growth opportunity. I was challenged to develop my personal therapeutic style, research and teach about my areas of interest, and integrate aspects of diversity theory and cultural competency in practical ways. I set a personal goal to fine tune my assessment and report writing skills and to integrate assessment into treatment.

Moving from an urban, east coast environment I was initially unsure about making Wenatchee my home for the year, but I quickly found the community to be very welcoming and the beautiful surroundings beyond comparison.

Nyssa Petersen-Ventura, Ph.D., LMHC

Ph.D. – Biola University, La Mirada, CA

Doctoral Intern: 2014 -2015

My year as a Behavioral Medicine intern was a valuable time of professional and personal growth. I enjoyed being immersed in the primary care setting and experiencing what it was like to work in a multidisciplinary team to provide patients with holistic, integrated mind-body approach care. In this setting I had the opportunity to work with a variety of age groups and presenting problems including ADHD, binge-eating, bipolar, cultural adjustment, dementia, PTSD, schizophrenia, somatic symptom, substance abuse, and many more. I also enjoyed getting more exposure to the Hispanic population and learning how to do therapy with a translator.

Dr. Breedlove and Dr. Whitfield are very supportive supervisors and make themselves available at any time needed. They provide excellent training in integrated behavioral care and show you from their examples that there is not just one way to do the integrated model. They help you to develop a personal style that works for you within the integrated model. For me, the biggest adjustment at first was learning to fit a traditional 45-minute therapy session into 30-minutes, but it turned out to be very do-able and more rewarding than I originally thought it would be. I was surprised that the integrated model included long-term patients that I was able to see for the whole year along with patients that I did more brief therapy with.

The internship was an excellent experience learning to work alongside the medical and specialty providers and learn from their training as well. There are opportunities to pursue areas of personal interest in the clinic. I enjoyed getting involved in a children's weight management group with the Diabetes and Nutrition department and participate in research. Overall, I feel that the experience I have gained through the CVCH doctoral internship program has provided me with a strong foundation to work in any setting I choose in the future.

Tiffany Washa, LMHC

Psy.D. – Saybrook University

Doctoral Intern: 2014 -2015

Completing the pre-doctoral internship program with the Behavioral Medicine (BMed) department at CVCH was everything I had hoped for in applying for an internship in an integrated health setting. Coming into the internship, I had a growing interest in holistic models of health and I arrived eager to learn more about the connection between mind and body in shaping health and functioning. Over the course of the internship year, I gained invaluable knowledge in a range of areas as diverse as the clinical population with which I worked. I particularly enjoyed the didactic trainings, which covered an array of interesting topics that are chosen in accordance with the interns' input and interests. I also enjoyed the dynamic environment of BMed; a typical day as a BMed intern is comprised of a variety of activities, ranging from crisis management and integrated visits with medical professionals, to scheduled and walk-in therapy sessions, to running

a pain management or DBT group, from administering standardized psychological assessments to participating in didactic training sessions or group supervision. The opportunities for learning are virtually limitless as a BMed intern.

Clinically, the internship program affords the opportunity to work with a diverse population of clients presenting with a wide range of complex medical and mental health issues in a fast-paced setting. The level and quality of supervision I received as a BMed intern allowed me to navigate these challenges while helping others and growing professionally along the way. The diversity of the experiences afforded within this integrated health setting, the supportive environment of multidisciplinary professionals who are consistently available for consultation, and the high quality of supervision provided to BMed interns converge to provide a clinical training opportunity like no other.

Jared Cozen, LMFT

Psy.D. - James Madison University, Harrisonburg, VA

Doctoral Intern: 2013-2014

The doctoral psychology internship at Columbia Valley Community Health was a great opportunity to work with an extraordinarily wide range of presenting issues including psychosis, substance abuse, conversion disorder, trauma, OCD, chronic pain, anxiety, grief, depression in addition to co-occurring disorders such as cancer, traumatic brain injury, and renal disease. My patients included both middle class professionals and migrant farm workers across the life span from 8 years of age to people coping with end of life issues. There is also a strong social justice component to the work as I learned to more effectively advocate for my patients' basic rights and needs.

As my first exposure to Behavioral Medicine, my greatest challenge was learning how to squeeze my previous 50 minute hour into 20 minute sessions in which I had to simultaneously provide crisis intervention, safety assessments, diagnostic evaluations, treatment plans, and recommendations to both patients and their medical providers. However, the supervision was superb. My director and secondary supervisor were available for guidance and consultation at any time of the day. I was welcomed into both the Behavioral Medicine Department and the different medical teams as a colleague whose recommendations were sought and respected. If you're a flexible, adventurous, team oriented person who likes a fast paced environment and is interested in the Integrated Behavioral Health Care Model I highly recommend this training program.

Adriana Marti, LMHC

PsyD - Carlos Albizu University, Miami, FL

Doctoral Intern: 2013-2014

Completing my internship at Columbia Valley Community Health (CVCH) has been a remarkable journey. I remember that back when I was applying to internships, my professors would emphasize that I needed to apply to a site that was going to be a “good fit” for me. I did not know what they meant until I got to CVCH. From the moment I stepped into the clinic I felt welcomed by providers, staff and management. From the medical assistants, to janitorial, to PA’s, to MD’s and to the CEO everyone greeted me with a genuine smile on their faces which made me feel right at home. I was even more surprised when both of my supervisors, Dr. Rickard and Dr. Rea, were not only approachable but treated me as a provider while mentoring me all the way through my transition. Moreover, I have to say that one of the things that I enjoyed the most about this site was the population. This was my first time working with the migrant workers and I have to admit that it has been extremely rewarding. After completing my year at CVCH I can truly say that I know now the definition of having a “good fit”. My internship was everything I wished for and even more and for that I will be forever thankful.

Mussarat Khan, PsyD

CA School of Professional Psychology, Alliant International University, Sacramento, CA

Doctoral Intern: 2012-2013

The integrated model of behavioral medicine has allowed me to serve a highly underserved population within a multidisciplinary team. Working within a framework where primary care providers are easily accessible for continuity of care has been a great experience. Dr. Rickard and Dr. Rea have provided invaluable guidance in both clinical practice and psycho-pharmacological approaches. I have learned more about evaluation and assessment than any prior years of practice. Health psychology has always been an interest of mine and this model is a great example to how psychologist could contribute to an individual’s wellbeing.

Laurie Dickstein-Fischer, PhD

Northeastern University, Boston, MA

Doctoral Intern: 2012-2013

I've grown both personally and professionally during my internship year in the Behavioral Medicine Department at CVCH. I've been privileged to work with a wonderful group of medical professional and assistants within a primary care setting. From the beginning, I felt that everyone was warm and welcomed me with open arms.

The training year has provided me with insight into health psychology and working within the complexities of an integrated primary care setting. I have appreciated being part of a multidisciplinary team and using brief modalities to address a wide range of diagnosis and presenting problems. Working at CVCH has also allowed me to gain valuable multicultural competencies within the Hispanic and migrant population. A huge benefit of the internship experience is the opportunity to participate in biweekly medical provider meetings. The meetings provide a systems and ecological perspective to health care and innovations in medicine which is crucial to patient care and psychological indices of well-being. The meeting also allow for a true integration of care between medical providers and psychologists.

My training year would not have been complete without the support of my remarkable supervisors. Both Dr. Rickard and Dr. Rea are supportive of my personal and professional growth and provided a nurturing environment to transition into an early career psychologist. Their doors were always open for an impromptu consultation or just to touch base. My supervisors have also treated me as a professional and allow me to be fairly autonomous and have provided mentorship and guidance. I have truly looked up to my supervisors and see them as role models for this wonderful profession.

My year at CVCH has provided me with a unique learning experience filled with challenges and wonderful rewards. Some days can feel challenging, but I have also felt supported from the marvelous support staff, colleagues, and fellow intern. I have met the most incredible people this year from all walks of life and I consider my year at CVCH an incredible gift! CVCH have exceeded my expectations and I will be forever grateful.

Anna Charbonneau, LMHC, PhD

Seattle Pacific University, WA

Doctoral Intern: 2011-2012

Completing my internship at Columbia Valley Community Health within the Behavioral Medicine Department has been both extremely challenging and rewarding. The fast pace of our work in primary care as well as the broad range of presenting issues is one of the most challenging aspects of being an intern at this site. This is a tremendous opportunity for clinical training. Having completed my internship here has allowed me to develop competency working with a very wide range of clients of all ages, ethnicities, and clinical presentations. For example, a typical day as interns at this site includes working with a Hispanic family struggling with child behavior issues, completing an adult's substance use evaluation, handling a patient coming in with a crisis, teaching an anxious patient relaxation skill, consulting with primary care physicians, and teaching a pain management group.

These tremendous challenges are more than balanced by the quality of the training provided here. The training, support, and supervision have been excellent. Dr. Rickard and Dr. Rea are available at all times for consultation and training.

Didactics and supervision are always on schedule, and extra time for consultation is consistently available. The supervisors at this site have pushed me consistently to develop clinical excellence, and have given me guidance and encouragement each step of the way.

There are two other important benefits to internship here that may not be immediately apparent. First, this site pays for you to obtain licensure at the Master's level and will also do the work of credentialing you with many insurance companies. This alone makes you highly qualified for many post-doctoral positions. In Washington State, a post-doctoral position is not required, so having licensure at the Master's level provides you with the opportunity to start your career immediately if you choose to do so.

Second, Columbia Valley Community Health is a leader in the Medical Home Model. It was the first institution in this region to receive Joint Commission accreditation as a Certified Medical Home. Dr. Rickard, along with several other physicians at this site, is often invited as guest speakers and trainers to help coach others in developing this model. This clinic is a leader in the Medical Home Model, and will prepare you well for a career in the medical home.

The work is demanding, challenging, and at times exhausting, but also extremely rewarding. Having completed my internship here I can say with confidence that I am well prepared to handle most challenges as I begin my doctoral career.

Paula Sigafus, LMHC, PhD

California School of Professional Psychology

Doctoral Intern: 2011 - 2012

My internship year at CVCH challenged my clinical skills and provided training in the integrated model of Behavioral Medicine. It is an intense environment that requires you to see many patients in a short period of time, as the brief model of psychotherapy is the most frequently utilized intervention. Along with a fluctuating therapy caseload, consultations with providers happen frequently throughout the day.

Patients range from young children to seniors with a variety of psychological issues. This variety extends from patients with complex clinical issues to those who have never had any sort of psychological treatment. The intern's role can range from completing pain evaluations and pain management groups, to substance abuse evaluations and case management activities to maintaining continuity of care.

I observed the variety of ways organic etiology, medications and a variety of psychosocial issues can combine to affect clinical presentations. As an intern, you will work closely with a variety of providers in the medical home environment to address the wide range biopsychosocial issues. Supervisors are always available for consultation and the staff and other providers are supportive and encouraging. The internship year challenged me personally and clinically and above all is a good learning opportunity in Behavioral Medicine.

Misha Whitfield, LMHC, PsyD

Argosy-Washington School of Professional Psychology, WA

Doctoral Intern: 2010-2011

I chose to come to Columbia Valley Community Health because of the extensive biopsychosocial training provided. As a clinician, I was trained to see individuals through this lens; however I never really knew what it meant to see the "whole" person until this internship site. CVCH's integrative model has given me the opportunity to work collaboratively with physicians, psychiatric nurse practitioners, and psychologists thus giving patients the comprehensive care they need and desire. I am gaining an understanding of the different organic issues that may be contributing to psychiatric symptoms, lab results, and how medications could exacerbate psychiatric symptoms. In the short amount of time at CVCH, I have already learned more than I could have ever imagined. Yet, there is still so much more to learn. Every day here is fast paced and full of ambiguity. I never know what my day will consist of and it is never boring. One of the most important aspects of an internship site for me includes supportive staff members and continual learning experiences. There is an open door policy here thus whenever I feel "stuck" I always have someone to consult with. I am consistently challenged and have grown both professionally and personally during my time here. CVCH has exceeded my expectations and for the first time in my clinical and educational endeavors, I have finally found my niche in this field.

Laura Sisson, MA, PhD

Forest Institute-School of Professional Psychology, MO

Doctoral Intern: 2010-2011

I came to Columbia Valley Community Health because I wanted intensive training in a working integrated model; I want to work where physicians and psychologists collaborate to provide comprehensive care for patients. I was prepared for a fast-paced environment with a wide range of responsibilities, and that's exactly what I got: from children to geriatrics, individual therapy and groups, conceptualizing with physicians and explaining diagnoses to patients. I never know what my day is going to look like when I get to the office in the morning. It's challenging, that's for sure, and the learning curve is steep, but it drives me to grow clinically and professionally. Many patients I see in the clinic have never sought psychological treatment before, so cases can be complex and convoluted. Not only that, I serve as an ambassador for my profession and help assuage any stigma related to seeking treatment for future referrals. Taking on so many responsibilities can be a complicated undertaking that requires delicate balance. Fortunately, I have a network of support. I work with nurses, assistants, and supervisors who are invested in the training process. Someone is almost always available for friendly support and encouragement. I find myself surrounded by people of integrity who challenge me to expand, but never cross, my professional competency. Out of all my experiences at CVCH, that's what I value most of all.
